11. Sign the request for reconsideration has been considered but does NOT place the application in condition for allowance because: The applicant argues that prior art Clubb (US 7,323,001) is deficient as a reference because Clubb discloses a filter with pores. However, this argument is not persuasive. The examiner maintains that the tube body 50 created in Clubb is so tightly strande and creates helical grooves Fig. 5B that serve to carry away the clot powder in a rearward direction. Thus, not allowing the clop powder to escape but to maintain it within the filter 5D. The pore size in Clubb is from 30 to 300 microns which the examiner believes is much smaller than the clot powder of applicant's invention thus no component of Clubb (i.e. the hard clot powder) would be able to travel through the helical grooves to the outside.	d
